GENERAL PRINCIPLE

This test method covers the measurement of the relative abrasiveness of synthetic turf. Friable foam blocks are attached to a weighted platform which is pulled over the playing surface in a specific pattern. The weight of the foam abraded away determines the abrasive index of the surface. The test was completed in laboratory conditions of 70 F and 50% RH. The sample was tested as received.

TEST RESULTS

RELATIVE ABRASIVENESS AVERAGE	40.7
